

In my 15 yrs experience as a welder I have come across many different makes and models of welding machines. Recently, I was introduced to a Red-D-Arc E300 3+2, and although I was sceptical about buying used welding machines, I'm sure glad I did.

First off, I love how easy it is to use. Changing welding procedures is as easy as flipping a switch. Strike your arc and you can be assured of smooth, seamless welding. With constant uninterrupted flow you can be assured of great fusion no matter what the welding process. A vast duty cycle also allows my employees to weld all day long with no worries of down time.

In the end, as far as welding machines go, you can't get anymore flash for your buck. They are all very reliable piece of equipment in my opinion. If I could turn the clock back, our entire shop would be filled with your used, 3+2 welding machines

Thanks very much

Sincerely,
